SUMMARY

Software engineer (co-op) focused on backend development and systems tooling. I build reliable, maintainable systems by combining rigorous automated testing with declarative infrastructure (NixOS, Docker). Seeking a 3-month software engineering internship in the US, starting June 2027.

EXPERIENCE

Software Engineer (Co-op) — Numih France (DOGRH)

Sep 2025 – Present

- Architected and executed the automated integration test suite for the Hôpital Numérique platform.
- Massively refactored the test architecture to unify execution via API or maven, optimizing developer workflow.
- Created abstractions and data isolation tools via Jenkins for reproducible test environments.
- Developed and deployed a Spring Boot internal tool to production.

↳ portfolio.qgroget.com/en/blog/automated-testing-framework

Fullstack Developer Intern — Ekeep-IT

Apr 2025 – Jun 2025

- Developed a web application within an Agile environment.
- Utilized Spring Boot for the backend and Next.js for the frontend.

Logistics Assistant — Flint Group

Jun 2023 – Aug 2024

- Managed inventory with SAP, ran weekly stock counts, and tracked finished-goods flows.

SELECTED PROJECTS

min-btc-node

github.com/Strange500/min-btc-node

Built a minimal Bitcoin full node in Rust from scratch, hand-rolling the wire protocol's binary serialization and concurrent peer handling to understand how blocks propagate across the network.

Rust · Bitcoin · Networking

nixos-config

portfolio.qgroget.com/en/blog/nixos-2026-reproducible-config

Declared multi-host NixOS configurations and dotfiles with Nix flakes and Home Manager to make development environments versioned and fully reproducible across machines.

Nix · NixOS · Linux · IaC

pixel-war

github.com/Strange500/pixel-war

Designed a Web3 pixel-canvas dApp with Solidity and JavaScript where users bid on-chain to own pixels, claim refunds when outbid, and mint ERC-721 snapshots — reasoning through on-chain state and smart-contract security.

Web3 · Solidity · JavaScript · Blockchain

HomeLab Infrastructure

Provisioned a self-hosted server with Unraid and Docker running Jellyfin, Gitea, and Pi-hole to learn bare-metal provisioning and network routing hands-on.

Unraid · Docker · Linux · Self-hosting

RayTracer-Rust

github.com/Strange500/RayTracer-Rust

CPU ray tracer in Rust with BVH acceleration, Phong shading, reflections, and a custom scene file format — built from scratch.

Rust · Graphics · Ray Tracing · BVH

QGChat

github.com/Strange500/QGChat

Full-stack chat app in Java EE with Docker Compose deployment, SQL persistence, and a JavaScript frontend.

Java · Java EE · Docker · WebSocket · SQL

ascii-cube-rs

github.com/Strange500/ascii-cube-rs

Real-time ASCII 3D cube renderer compiled to WebAssembly via a Nix flake — powers the hero widget on this portfolio.

Rust · WebAssembly · Nix

SKILLS

Languages & Systems: Rust · Java · C · Python · TypeScript · JavaScript · WebAssembly

DevOps & Infrastructure: NixOS · Linux · Docker · Podman · Jenkins · Traefik · Git

Backend & Web: Spring Boot · Java EE · React · Next.js · Node.js · Angular

Architecture & Quality: Selenium · JUnit 5 · Design Patterns · Agile

EDUCATION

Master of Engineering — Software Engineering

Sep 2025 – Present

IMT Nord Europe, Institut Mines-Télécom

Bachelor of Science — Computer Science

Sep 2023 – Jun 2025

University Institute of Technology of Lille — *Graduated top of the class*

LANGUAGES & INTERESTS

Languages: French (Native) · English (Professional — TOEIC 980) · Spanish (Intermediate)

Interests: Sport shooting · Running · Swimming · Cycling · Weightlifting
